1. The attached small key is for adjustment of the manometer needle. Adjustment range: 6mmHg from center of zero position. If needle is beyond this range, it should be re-calibrated.

2. Put the key into air intake hole, turn in clockwise direction; needle in the gauge will go left. Turn key in anti-clockwise direction; Needle will go right.

3. Through such adjustment, the needle will be in exact position of zero. Remove key when adjustment is completed.

4. Such adjustment will not cause any discrepancy in test result.

5. Warning: small key cannot be turned full circle of manometer. Otherwise, mechanism will be damaged.
